

Normaliseur à Large Bande pour la Mesure de la Position des Faisceaux du LHC

Wide Band Time Normaliser (WBTN)

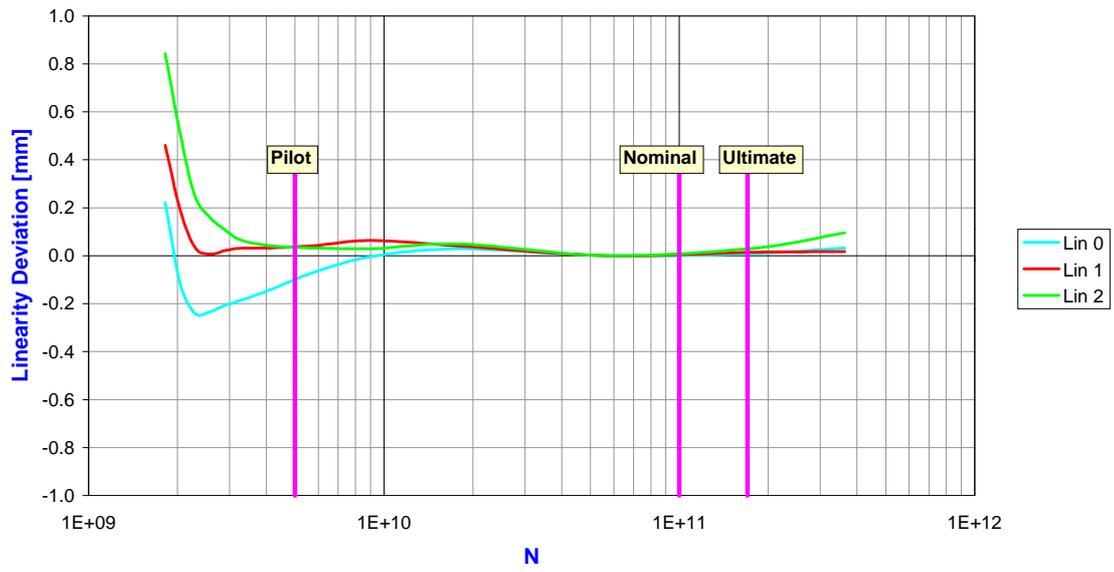

Mesure comparée des caractéristiques des trois prototypes de la 2^e génération

- Description de la carte WBTN
- Linéarité de la position centrale en fonction de l'intensité du faisceau et du temps entre les paquets (89 μ s et 25ns)
- Influence du bruit sur la position centrale en fonction de l'intensité du faisceau
- Comportement transitoire des 20 premiers paquets
- Linéarité sur un axe en fonction de la position
- Linéarité sur un axe en fonction de la position avec linéarisation de la fonction de transfert du pick-up
- Évolution vers le futur

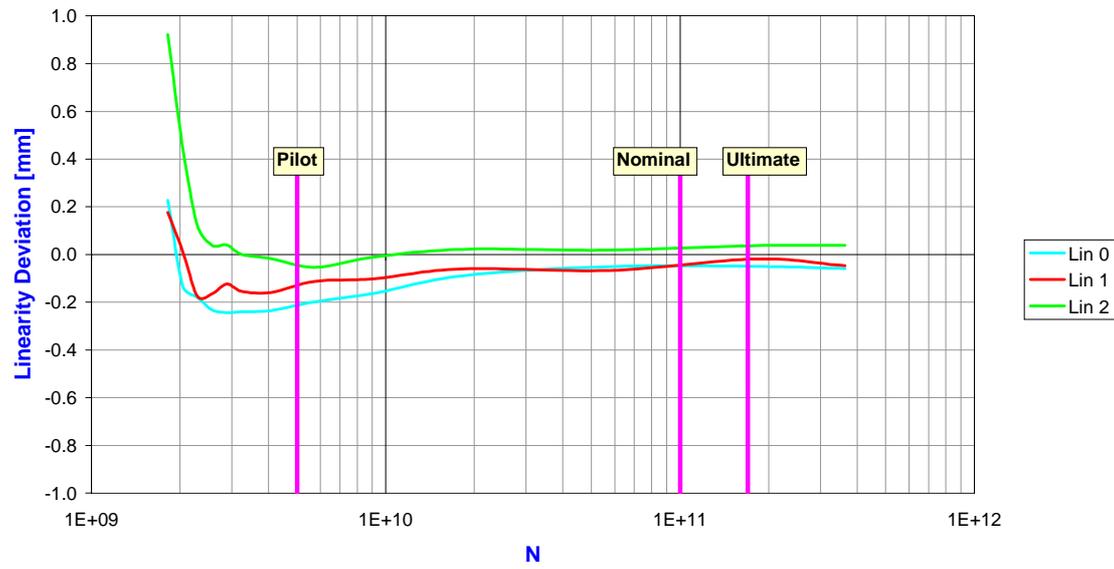

WIDE BAND TIME NORMALISER

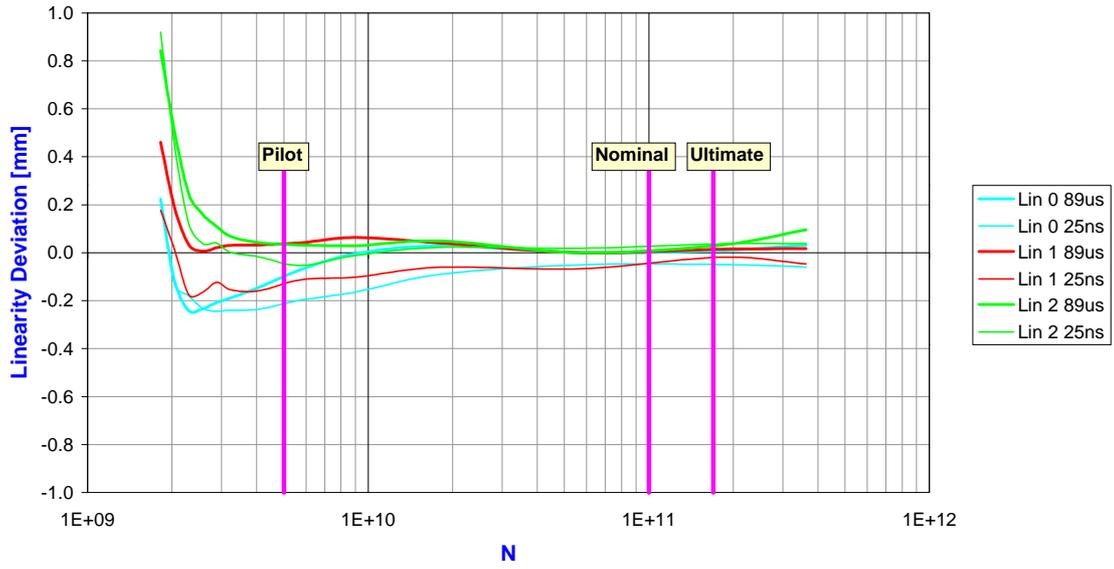

WBTN - 2nd Prototype
Linearity versus Beam Intensity (Period = 89 μ s)

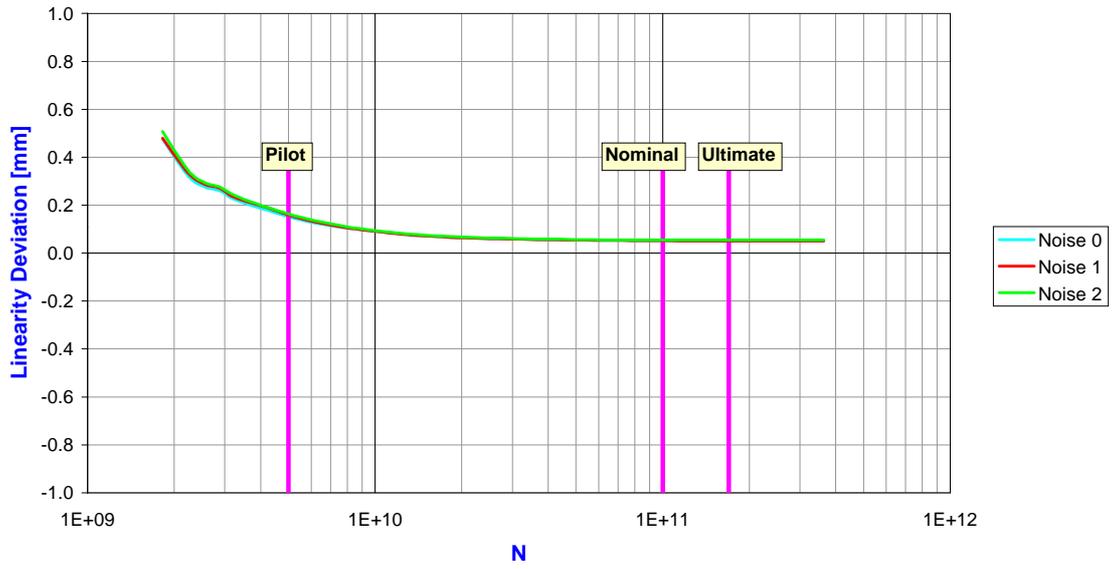

WBTN - 2nd Prototype
Linearity versus Beam Intensity (Period = 25 ns)

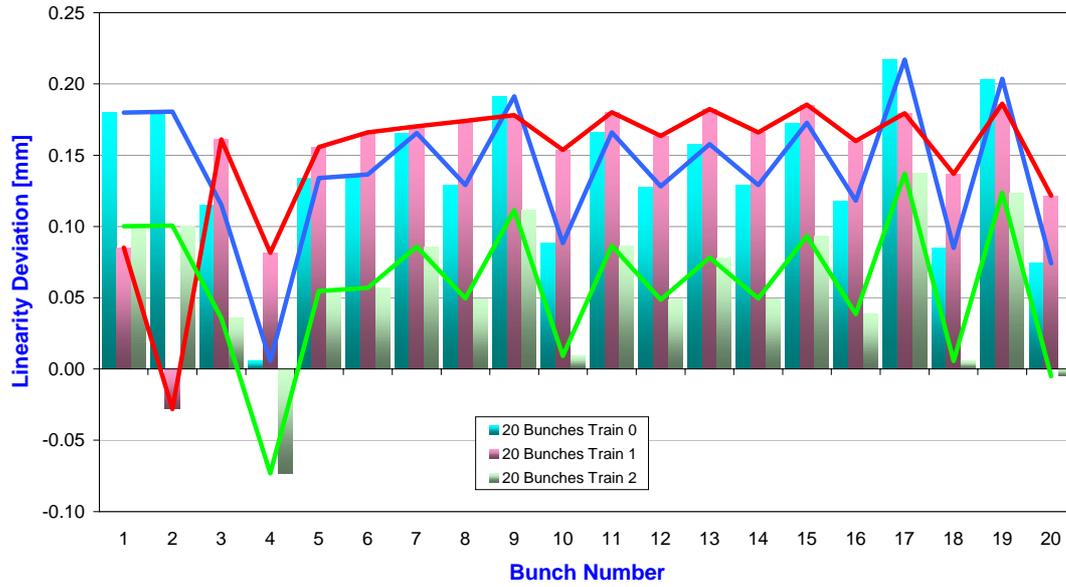

WBTN - 2nd Prototype Linearity versus Beam Intensity

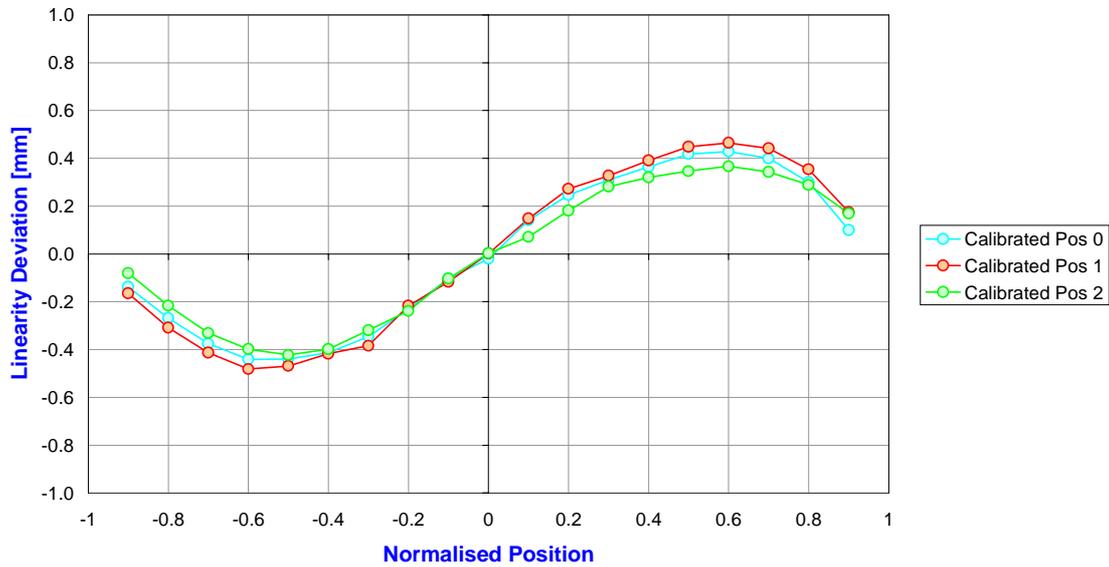

WBTN - 2nd Prototype RMS Noise versus Beam Intensity

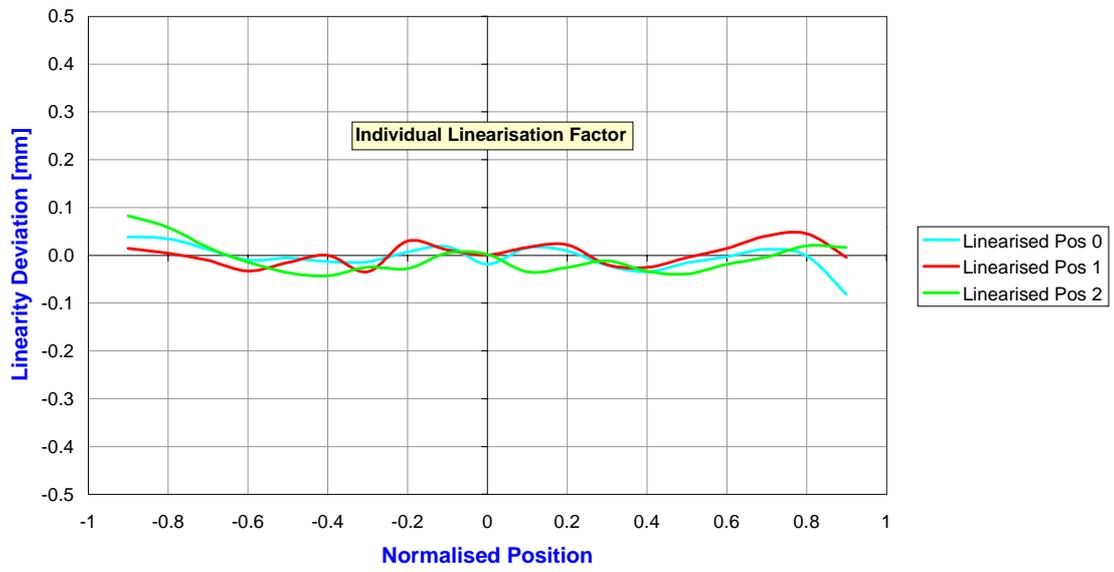

WBTN - 2nd Prototype 20 Bunches Train Position versus Continuous Beam

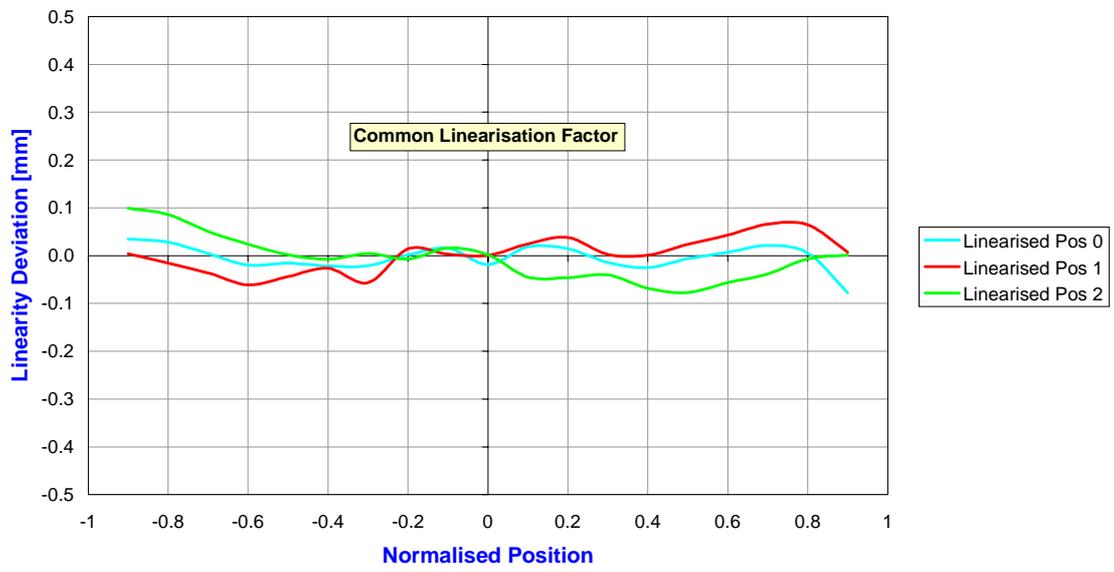

WBTN - 2nd Prototype Linearity versus Position (Period = 89 μ s)

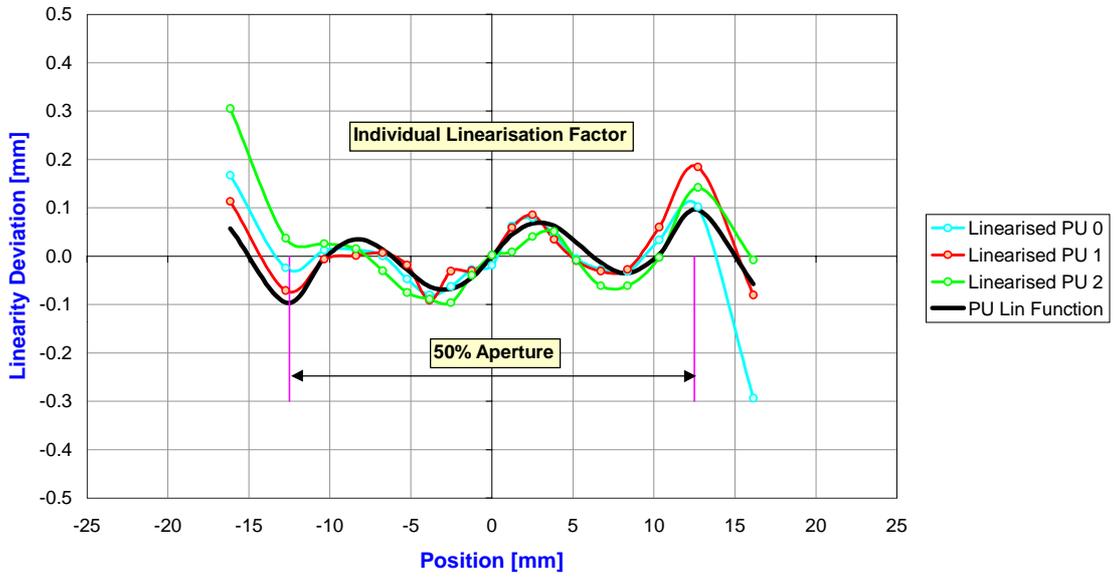

WBTN - 2nd Prototype
Linearity versus Position (Period = 89 μ s)

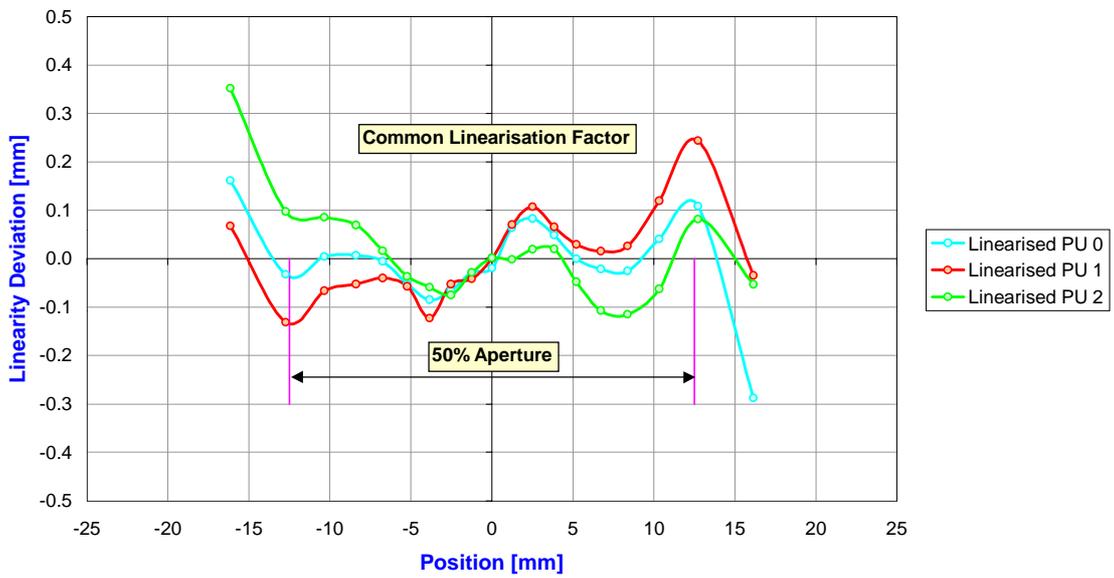

WBTN - 2nd Prototype
Linearity versus Position (Period = 89 μ s)

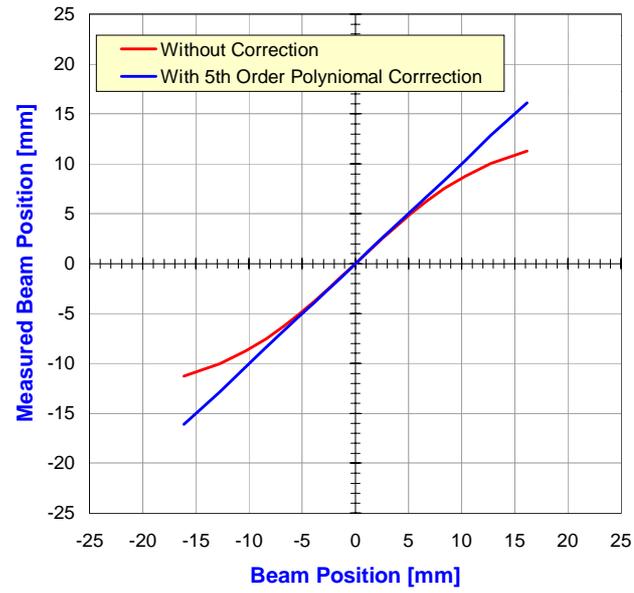

WBTN - 2nd Prototype
Linearity versus Position (Period = 89 μ s)

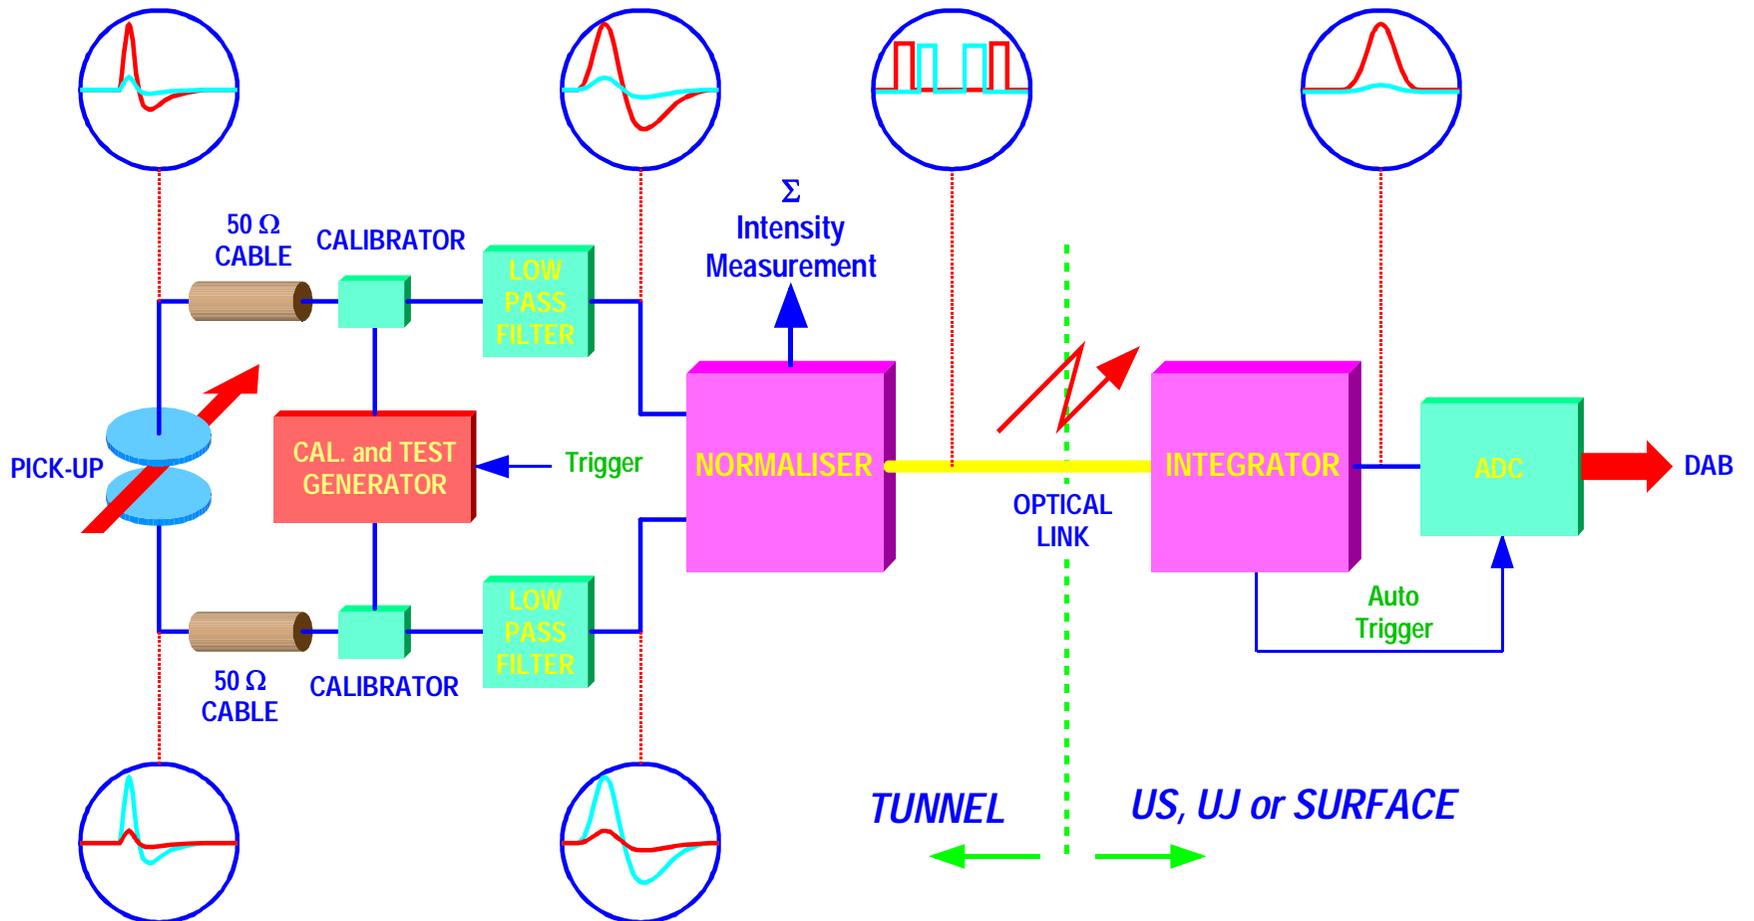

WBTN - 2nd Prototype
Linearity versus Position (Period = 89 μ s)

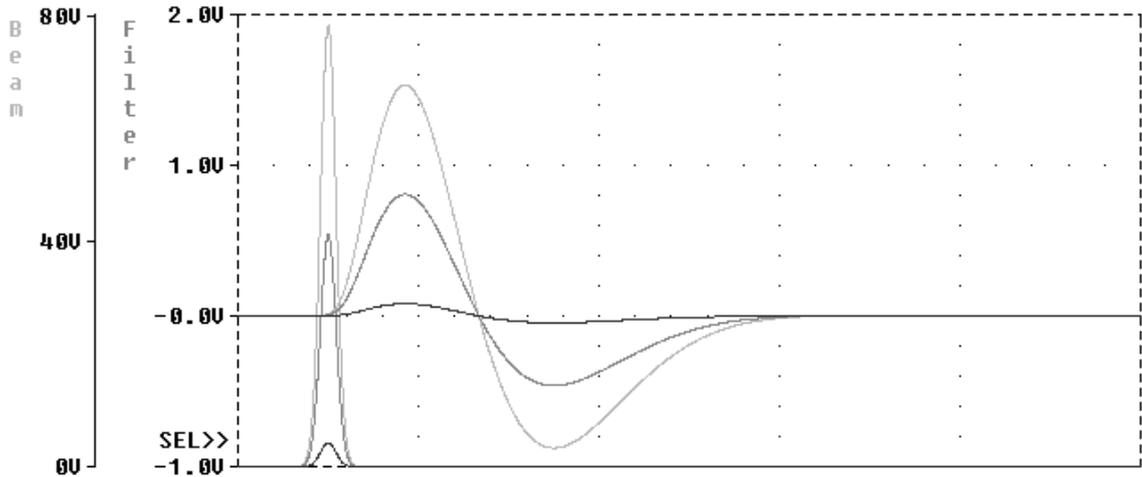

Pick-Up Transfert Function

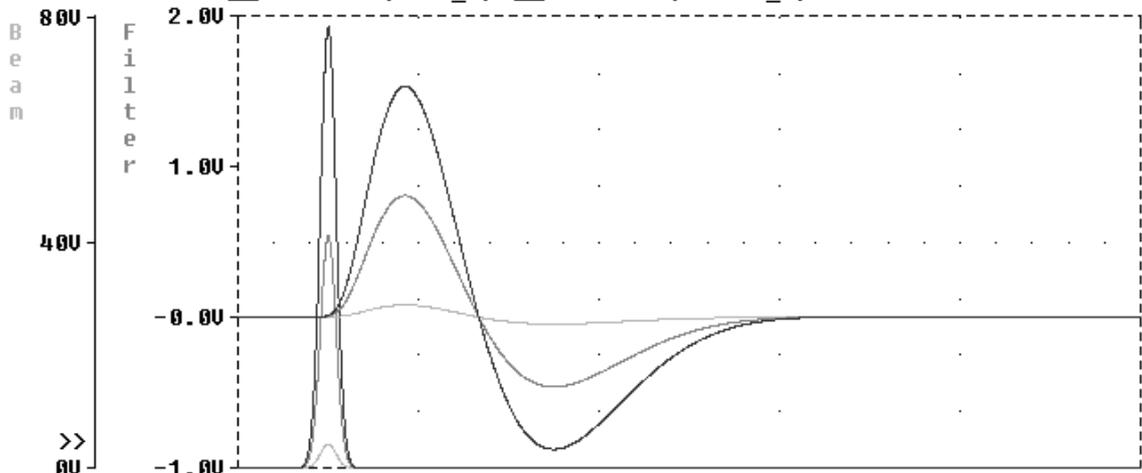

'LHC' BEAM POSITION MEASUREMENT
